

Speaking Opportunities at World e-ID Congress

Identity Services for Government, Healthcare & Enterprise

Conference & Exhibition – September 19-21, 2012 – Nice, French Riviera

www.worlde-idcongress.com

Deadline for abstract submission is **March 30, 2012 (extended)**

World e-ID Congress extends the successful 7-year-old *World e-ID* conference (www.worlde-id.eu) with a new format aimed at Identity Services managers and decision makers from both public and private sectors.

The 2012 conference will strengthen its global approach through a larger panel of **most innovative and significant e-ID projects for Government, Healthcare & Enterprise** around the globe. It will also highlight best practices, concrete solutions, insights into worldwide policies, technology and market dynamics to help the participants to succeed in their e-ID plans and understand where the market is heading.

In addition, the 2012 program will feature:

- a specific session on emerging countries in partnership with the World Bank
- a focus on Healthcare Identity Services
- interactive panels on harmonization of policies, cross border issues, etc.

The Congress remains in the delightful Côte d'Azur but will take place in a new and larger venue in the centre of Nice. It will also benefit from the synergies of the co-located NFC World Congress in terms of contents and networking as well as exhibition attendance as both events share the same exhibition space.

Your participation will be an ideal opportunity to share visions, see new perspectives and opportunities concerning your own e-ID projects at any scale and stage. Over 60 renowned speakers and panellists carefully selected by the Program Committee will share their expertise with 300 expected delegates: government experts, industry representatives, consultants, etc.

TOPICS

The World e-ID Congress conference Program Committee is looking for proposals from potential speakers able to deliver expert-level knowledge and practical information to our delegates in the following topics:

National, transnational e-ID programs around the world: case studies and lessons learnt
